

SurgeShield® Program Device Guide

Welcome to the SurgeShield® program.

A surge protection device has been installed on your home or business electric meter. It helps protect your home or business from power surges that enter directly from your electric meter, which can damage or destroy your appliances and/or business equipment.

The type of surge protection device installed depends on the type of meter that you have. Although the devices may appear different, they all provide the same level of protection.

Each surge protection device has one or two illuminated red light(s) indicating the device is working properly. We recommend that you periodically check that the red light(s) is illuminated to ensure your device is working properly. If the red light(s) is not lit, please contact Customer Service to have your device serviced at no cost to you.
